imajnet® Gecko

Digital twin web service
TO ACCESS YOUR ENVIRONMENT IN A FEW CLICKS

Field inspection | Project follow-up | Change detection | Inventories | Data centralization

DESIGNED TO MANAGE YOUR INFRASTRUCTURES ONLINE

▶ ACCESS YOUR NETWORK
and exploit up-to-date geo-referenced images anytime and anywhere to support your workflow.

▶ CREATE 3D FEATURES
imajnet® Gecko has a set of tools to tag, label and position in 3D any visible element in images.

▶ SHARE WITHIN THE TEAM
The possibility of making your own data public so that your colleagues of your team can benefit from your work.

▶ ANALYZE WITH IA
imajnet® Gecko integrates complementary artificial intelligence services able to automatically georeference in 3D equipments.

WWW.IMAJNET.NET

A powerful and complete set of tools

Georeference
your equipment and have
a digital reconstruction of
your entire network.

Measure
precisely in 3D.

Explore different views.

Search
from referential
and addresses.

Compare
your images and observe
the changes over time.

Collaborate
Share informations within
the virtual corridor.

Automate with AI
run additional AI services
to get a dynamic inventory.

OpenStreetMap and Microsoft® Bing Map are available as background maps.

MOBILE APP

For field operations

The imajnet LRS app enables you
to locate yourself in real time in
linear coordinates. If you do not
find yourself on the route, the LRS
app will give you the LR value of the
closest part of the route as well as
the distance and direction to it.

Download on the **App Store** GET IT ON **Google Play**

GIS INTEGRATION

For GIS users

imajnet® can be integrated into :

- ESRI/ArcGis®online with a
  dedicated widget.for web app
  builder.

- QGiS3® with a dedicated plug-in.

ANY APPLICATION

Third party GIS applications

imajnet® can be integrated into
any third party application with the
JavaScript SDK.

Use it standalone, integrated or on the field.

The imagery of your network is accessible online
via our imajnet® Gecko web application, or with
integrations into ESRI or QGiS platforms.

Our mobile application imajnet® LRS App follows
you everywhere in the field and allows you to
obtain your positioning in linear coordinates, simply
through your smartphone.
